

Extrusions & Rolled Sections

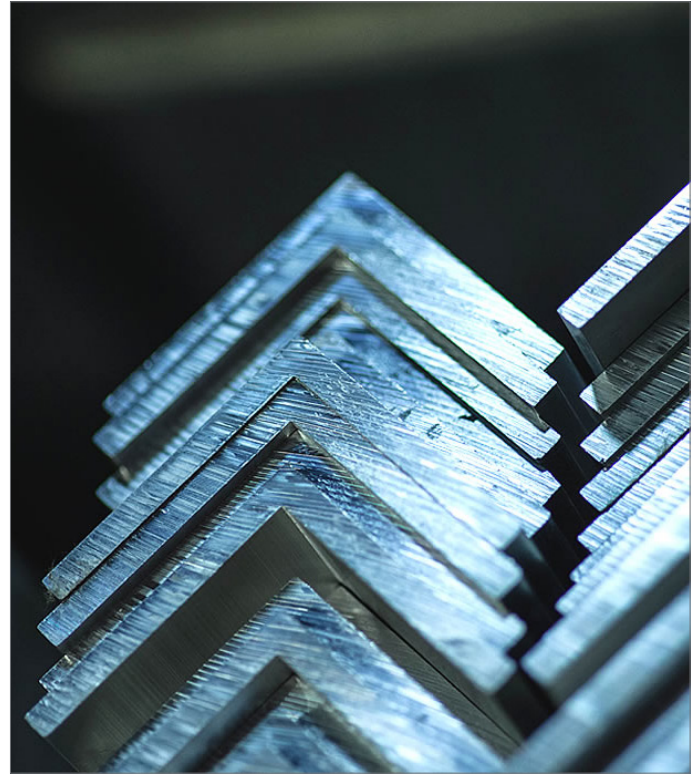

MRO Material Support

ASNA Extrusions represent extruded parts for Airbus aircraft, including aircraft seat tracks and angles, channels, and T sections, among other shapes.

ASNA (Aerospatiale Normalisation Generale) refer to extruded part for the French operation of Airbus. Typically, the extrusions are produced in particular aluminium alloy grades, including 2024, 6061, 7075, 7050 or 7178, and in various tempers. Roll-formed sections are usually made from 2024 or 7075 aluminium and can be rolled from bare or clad aluminium sheets.

About ASNA Part Numbers

ASNA extrusion parts sometimes have just four numbers after the ASNA code, such as ASNA2292 and ASNA2903, which are aircraft seat track parts. Sometimes the extrusion has a further four digits, for instance, ASNA3292-XXXX, which represents 90° angles - the last four numbers represent the size and thickness of the angle. We stock ASNA extrusions and rolled formed sections to support the global aerospace MRO sector.
